[57] ABSTRACT

An erasable label is provided on a tape cassette, computer disc, reel, or the like. The label comprises polyester film (e.g. colored Mylar film) having first and second faces. Indicia, such as straight lines, a grid and words, are screen printed (or otherwise applied) onto the first face of the film, and adhesive is applied to the second face of the film. A release paper may cover the adhesive, and when it is removed the film may be adhesively secured to an outer surface of a tape cassette, computer disc, or the like. One may write on the label with a suitable felt pen, and when the cassette or disc is to be erased and reused merely wipe off the written indicia with a cloth. The screen printed indicia stays permanently affixed to the polyester film.
